

# The Daily Health Screener is Your Guide

## Automated Return-to-Campus or Worksite (RTCW) Clearance During Surge

### COVID Negative

Population	RTCW Requirements	Testing Requirements <sup>1</sup>	Masking Requirements	Clearance
 <b>Symptoms, but COVID-negative <sup>2A</sup></b>	<b>Symptoms are completely gone or improving enough to resume work activities with a negative COVID test</b>	 Single Test at any time Color or PCR	Yes  <b>N95 NIOSH</b> Recommended	OHS Clearance Email through screener when meeting RTCW criteria  NO NEED TO CONTACT COVID HOTLINE
 <b>Highest Risk Exposures <sup>2B</sup></b>	<b>Asymptomatic with daily COVID testing protocol</b>	 Daily Testing (when onsite) first 5 days after exposure  Repeat single test at 7-9 days after exposure with Color or PCR test	Yes  <b>N95 NIOSH</b> Required	OHS Clearance Email through screener when meeting RTCW criteria  NO NEED TO CONTACT COVID HOTLINE

<sup>1</sup> Only UCSF-approved tests are required. Information is in the Daily Health Screener

<sup>2A</sup> For example, non-COVID-related runny nose, sore throat, cough, etc.

<sup>2B</sup> **Highest Risk Exposures** | High-risk exposures that are eligible for continuation of on-site work without quarantine include exposures to COVID-positive household members, to members of carpools, and to aerosol-generating procedures. **For reduced quarantine**, individuals must have completed initial series of COVID vaccination and not have immunocompromised conditions. **Effective 2/1** the requirement changes to initial series + booster (if eligible).

## Automated Return-to-Campus or Worksite (RTCW) Clearance During Surge

### COVID Positive

Population	RTCW Requirements	Testing Requirements <sup>1</sup>	Masking Requirements	Clearance
 <b>Recovered COVID Positive <sup>2c</sup></b> <i>Reduced isolation (5-9 days)</i>	<b>Symptoms are gone or improving <sup>3</sup></b> <b>Negative rapid antigen test performed by UCSF Staff IF entry &lt; 10 days</b>	 1   2   3   4   5 ← → 9 Rapid Antigen test at UCSF performed day 5 – 9	Yes  <b>N95 NIOSH Required</b> No PAPR	<b>OHS Clearance required:</b> Complete screener, contact tracing survey and negative Rapid Antigen test to receive OHS email clearance for early RTCW
 <b>Recovered COVID Positive <sup>2c</sup></b> <i>Standard 10 day isolation</i>	<b>Symptoms are gone or improving <sup>3</sup></b> <b>10 day isolation</b>	Testing not required after 10 days	Follow masking guidelines <sup>4</sup>	<b>OHS clearance required:</b> Complete screener and contact tracing survey, and receive OHS email clearance

<sup>1</sup> Only UCSF-approved tests are required. Information is in the Daily Health Screener

<sup>2c</sup> COVID positive persons | For reduced isolation, individuals must have received a booster (or are not yet booster eligible), and must not have immunocompromised conditions

<sup>3</sup> Fever-free >24 hours without fever-reducing medications; diarrhea-free >48 hours if not related to pre-existing conditions; feeling ready to RTW; if high-risk unit, no sneezing/coughing

<sup>4</sup> Masking Guidelines: Direct patient care and clinical research: N95s are strongly recommended. Novel Respiratory and airborne isolation: Fit-tested N95 required. Everyone else can use N95 if desired.
